TUTORIAL

# THE LNBCARD ⚡

The LNBCARD is portable PCB designed to elevate your Bitcoin lightning experience.

This sleek and stylish board is a functional learning tool to showcase a Bitcoin lightning transaction.

## Main features:

- Receive payment notifications from lightning wallets
- Compatible with LNBits, Alby or any LNDHub hosted wallet
- 8 Bolt colors and 3 notifications effects
- Allow powering from USB or external battery
- Nostr integration (*soon*)

Effect test button

Portable holder hole

Addressable RGB leds

USB/Battery power

# FULL **SETUP** GUIDE

If you got an LNBCard and need help to create your LNBits or Alby wallet follow the full guide scanning the QR code

*Required time: 20 minutes*

## **QUICK** SETUP

*Required time: 5 minutes*

1 - Power up your LNBCard to any usb power adapter (5V /1A)

2 - If config led is blinking with blue. Use your phone to scan for Wi-Fi networks and connect to **LNBCardAP** with password **BoltPower**.

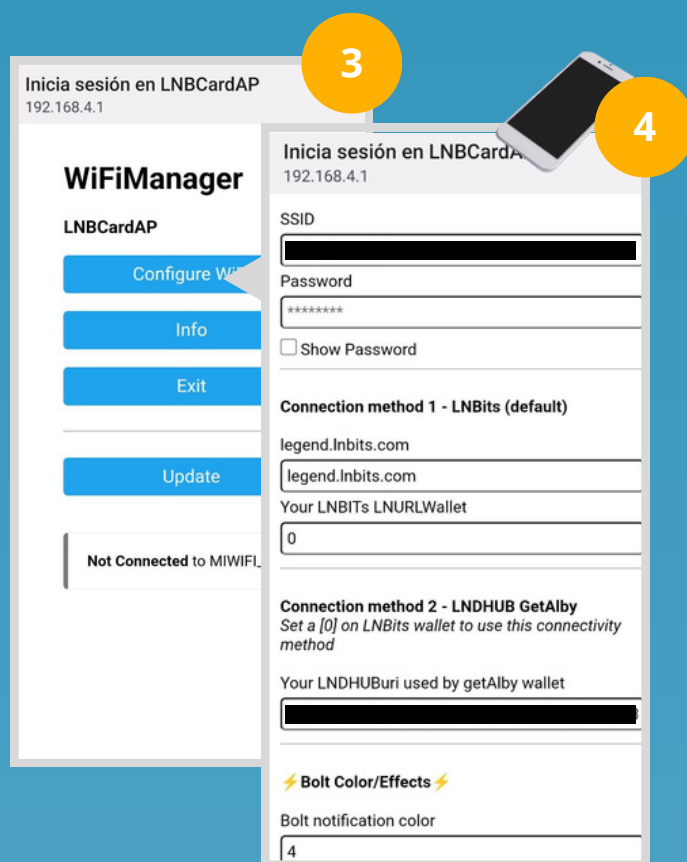

3 - Once connected, the following menu will be shown (2). Click on **Configure Wifi** to setup.

4 - Setup LNBCard parameters:

- **LNBits**: server to connect and wallet to check. Leave a [0] to use getAlby account
- **LNDHub**: set your LNDHubUri to interface GetAlby wallets or any hosted LNDHub wallet.
- **BoltColor**: set the bolt notification color.
- **BoltEffect**: set the bolt notification effect.

*For any problem check full guide or contact Bitronics team.*

## YOUR LIGHTNING WALLET

To use the LNBCard you will need a lightning wallet. If you don't have one, this guide helps you to create one.

You also can use your own lightning wallet on your node.

## CONNECTION METHOD 1 - LNbits

1

**Create an account at LNBitstning wallet:**

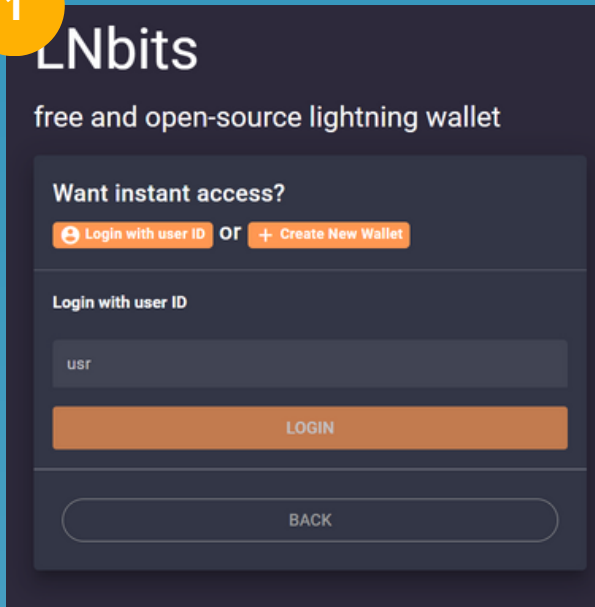

Use your LNBits account or login with usr ID.  
Go to [legend.lnbits.com](https://legend.lnbits.com)

2

**Add a new wallet:**

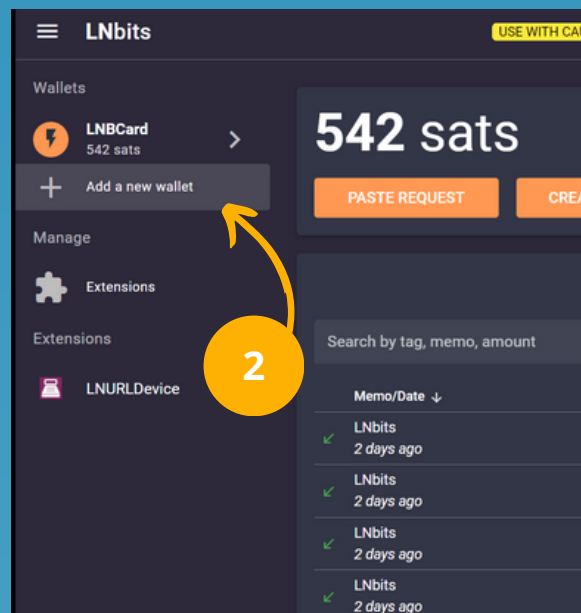

Create a new wallet and give custom name

1

[legend.lnbits.com](https://legend.lnbits.com)

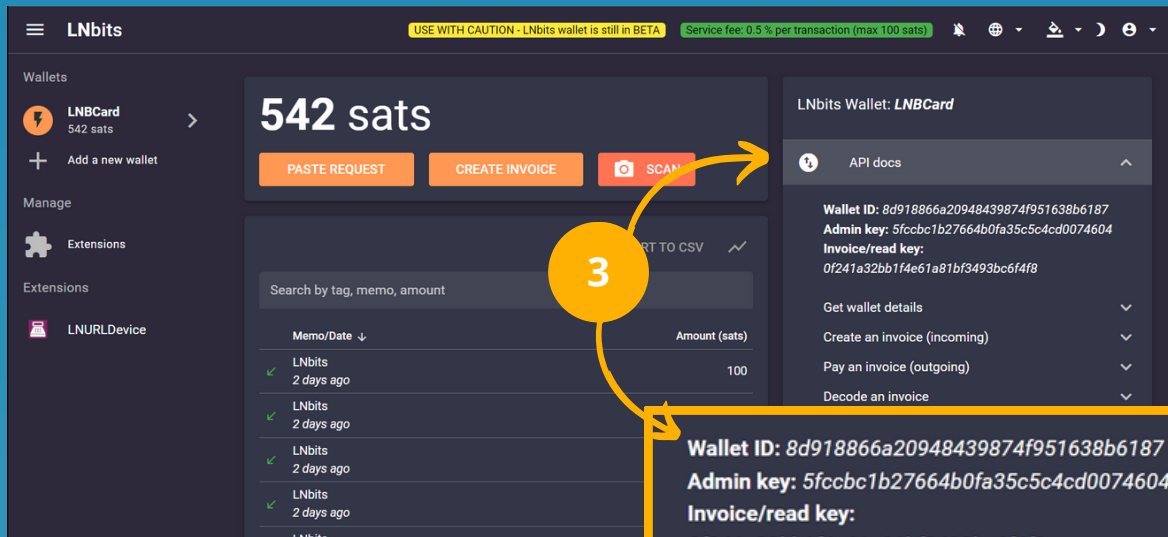

2

3

### Get your wallet ID:

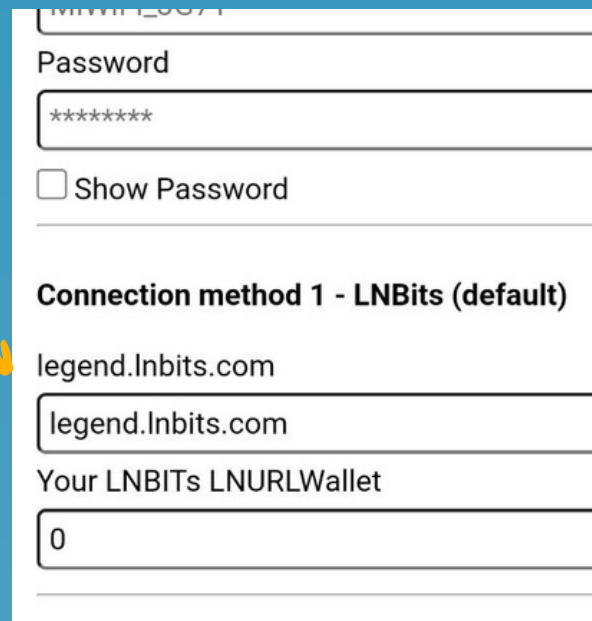

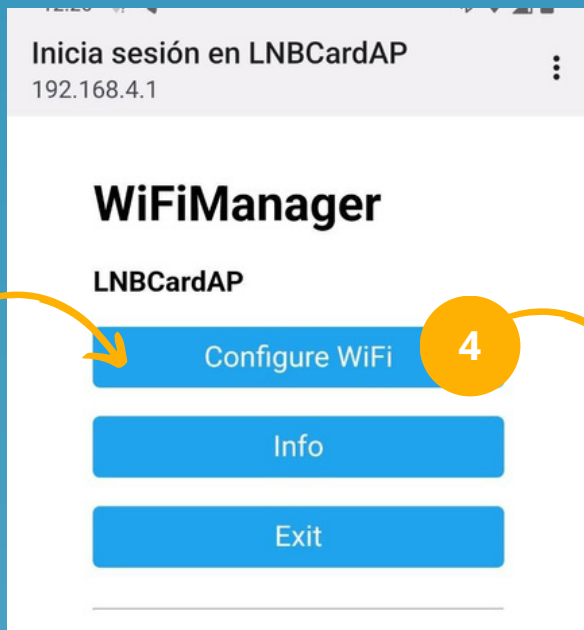

Use your LNBits account or login with usr ID.  
Go to *legend.lnbits.com*

4

### Add your wallet ID:

Setup your LNbits server or your onion node address and your Wallet ID

# CONNECTION METHOD 2 - LNDhub

With this method you can use any **LNDhub** compatible wallet like the most known nowadays getAlby.

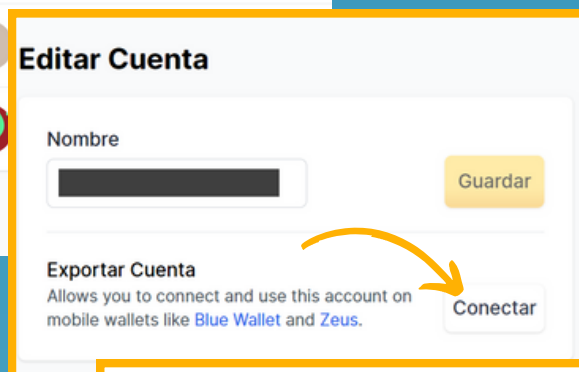

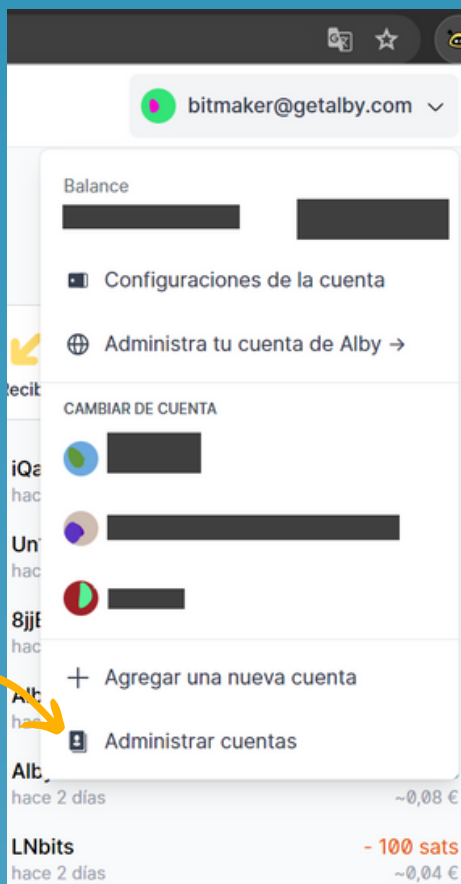

You can also use this method installing LNDhub in your node. You will only need to setup the **LNDhubURI**

## INTERFACING WITH Alby

1

### Get your LNDhubURI:

Go to Manage accounts > Click your account > Export account > URI credentials

2

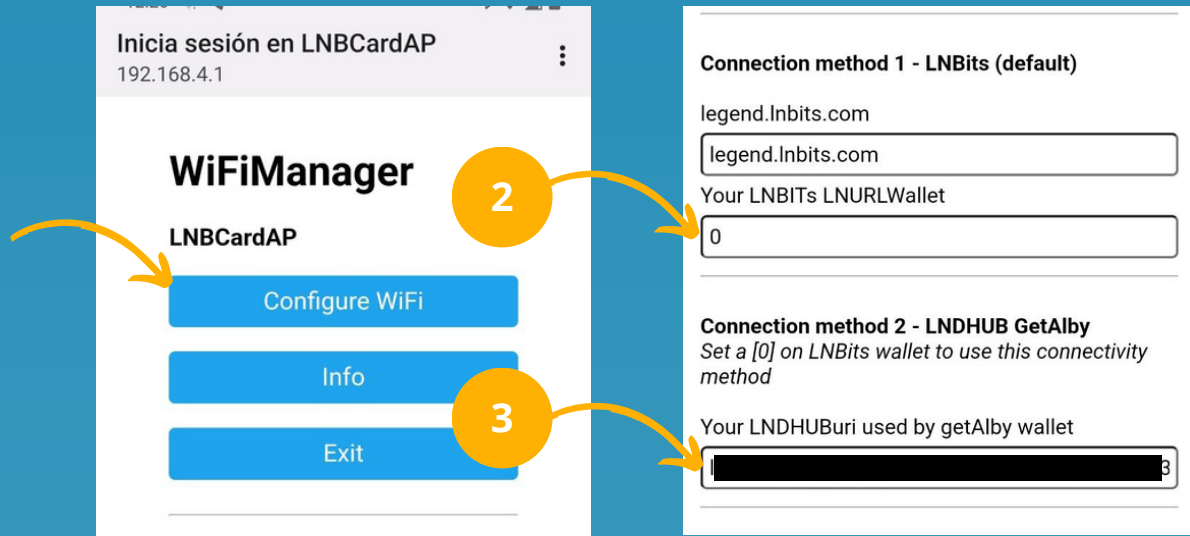

### Enable connection Method 2:

Set a 0 on LNBits Wallet to enable the LNDhub connection method.

3

### Set your LNDhubURI:

Set your LNDHubURI and press **SAVE**
